June 11, 2026

Dear Medpace Hiring Team,

I am applying for the AI Engineering Intern role. Medpace's mission, accelerating the development of safe and effective therapeutics, is exactly the kind of place I want to apply AI, because my background sits right at the intersection of machine learning and clinical software.

Before grad school I spent two years as a backend engineer at Wysa, working on a multi-tenant NHS clinical product. A large part of my work was building a data annotation platform that the AI team used daily to collect, label, and curate the training datasets behind their clinical models, and the rest was handling sensitive patient data responsibly (AWS KMS encryption, 20+ security fixes, a 90-day retention policy). Working where the data is clinical and mistakes have real consequences taught me to be careful and rigorous, which is the mindset I would bring to clinical-trial AI. I have also published applied medical ML: a first-author IEEE paper on Alzheimer's classification using transfer learning on neuroimaging data, which overlaps directly with the central-nervous-system work in your therapeutic areas.

On the technical side, I can take a problem from data through to a deployed application. In coursework I built machine learning from the ground up, a reverse-mode autodiff engine validated against JAX, and trained and compared CNN and ResNet classifiers on CIFAR-10 across optimizers with hyperparameter tuning. I optimized a Spark pipeline that cleans and processes a 1.4-billion-row dataset, and I have built and deployed interactive LLM applications, including AgenticSearch, an agent that verifies its own outputs and returns provenance for every value, hardened with 150+ tests. I am fluent in Python and PyTorch.

I came back for my MS to go deeper on AI and ML, and I am especially eager to grow into LLM fine-tuning and production ML infrastructure, the parts of this role I have the most to learn from. The chance to do that work in service of patient care is what draws me to Medpace. Thank you for your time and consideration.

Sincerely,
Deva Anand
