

Deva Anand

(413) 315-1715 | devaanand@umass.edu | devaanand.com | linkedin.com/in/devaaa | github.com/Deva-1903

Education

University of Massachusetts Amherst

Master of Science in Computer Science

September 2025 – May 2027 (Expected)

Amherst, MA

Coursework: Systems for Data Science, Performance Engineering, Optimization in CS, Advanced Machine Learning, Advanced NLP

Vels Institute of Science, Technology and Advanced Studies

Bachelor of Engineering in Computer Science and Engineering

August 2019 – May 2023

Chennai, India

Skills

Languages

TypeScript, JavaScript, Python, Java, C++, SQL, Bash, HTML/CSS

Frontend & Web

React, Redux, Electron, WebSockets, REST APIs, responsive UI

Backend & APIs

Node.js, Express, FastAPI, Fastify, async services & queues, integration testing, authentication, rate limiting

Cloud & DevOps

AWS, GCP, Azure, Docker, Git, GitHub Actions, CI/CD, Linux

Databases & Tools

MongoDB, PostgreSQL, Redis, SQLite, Stripe, pytest

Experience

Wysa

Backend Engineer

July 2023 – July 2025

Bengaluru, India

- Shipped production code used by real clinical clients: engineered a **multi-tenant NHS eTriage platform** for **8+ UK clients** (Node.js, MongoDB) processing **10,000+ monthly submissions**, integrated with Mayden's iaptus platform via REST APIs and aggregation pipelines, contributing to **\$340K+** in revenue.
- Architected a full-stack data annotation platform (**React, Node.js, MongoDB**) used daily by the AI team, replacing spreadsheet workflows with secure role-based REST APIs; cut manual operations by **100+ hours/month** and improved labeling throughput by **60%**.
- Built for systems that fail gracefully: monitored production logs during releases and client integrations, debugged and shipped fixes for tenant-specific incidents, hardened authentication and rate limiting, and remediated **20+ Vulnerability Assessment and Penetration Testing (VAPT) findings** to protect sensitive data.

Cario Growth Services Pvt. Ltd.

Backend Developer Intern

November 2022 – May 2023

Chennai, India

- Designed and implemented **20+ RESTful APIs** in Node.js and Fastify, backed by **PostgreSQL**, with input validation, clear contracts, and backward-compatible changes consumed in production by the frontend app team.
- Migrated the core codebase from **JavaScript to TypeScript** across multiple repositories and prototyped LLM-powered context-aware replies in a chat product, improving type safety, maintainability, and end-user response quality.

Projects

Underdogs Fitness - Production Membership & Payments Platform

underdogsfitness.in

React, Redux, Node.js, Express, MongoDB Atlas, Stripe | solo, live in production 3+ years

- Built and deployed a **production gym-management platform** solo end-to-end on the MERN stack, membership management, attendance, and **Stripe + manual-cash hybrid payments with a partial-payment ledger**, plus cron-based renewal automation; moved **90%+** of payments through the portal and cut the client's manual workload **~70%**.
- Designed for multi-branch from day 1 (every entity scoped by `branchId`, JWT-claim auth, frontend branch-context provider); when the client opened a 2nd branch a year later, onboarded it as a configuration change with **zero schema migration**; still live in production **3+ years** later.

cf-ai-research-scout - Edge-Native AI Research Assistant

github.com/Deva-1903/cf_ai_research_scout

TypeScript, Cloudflare Workers, WebSockets, SQL

- Built an agent that fetches web sources, generates multi-step research digests, and streams responses back to the client over **WebSocket** in real time, prototyped end-to-end on Cloudflare Workers with embedded SQL storage.
- Designed durable workflow boundaries so multi-step tasks **recover gracefully** from process restarts and individual tool failures; agent state and conversation history persist server-side without an external database.

Sonare - Offline Sign ↔ Speech Cross-Platform Desktop App

github.com/Deva-1903/Qualcomm-Sep25-Team-Sonare

React, Electron, FastAPI, MediaPipe, whisper.cpp | Qualcomm Edge AI Hackathon 2025

- Built a **cross-platform desktop app** integrating camera, microphone, frontend UI, and backend services into an on-device pipeline (MediaPipe hand tracking, whisper.cpp ASR, local TTS), designed and shipped under hackathon time pressure.
- Engineered a **FastAPI backend** and **Electron/React frontend** to run **fully offline with no network dependencies**; designed async APIs and queues to keep the UI responsive while handling local video and audio streams under tight device constraints.

Publication & Extracurriculars

- Publication:** "Alzheimer's Disease Classification using Transfer Learning," **IEEE CONIT 2023**, applied deep transfer learning on neuroimaging data for medical image classification.
- Selected for **GirlScript Summer of Code (GSSoC) 2023** and contributed to multiple open-source projects (Linkfree, Freehit, ProjectsHut).
- Tutored **30+** underprivileged students in programming at Sayur, non-profit in South Tamil Nadu.
