Rippling
Software Engineering Internship Hiring Team
San Francisco, CA

Dear Hiring Team,

I'm applying for the backend-focused Software Engineer Intern role for Winter 2027. I'm a Computer Science master's student at UMass Amherst with two years of backend experience before grad school, and the parts of this role I'm most drawn to, owning real backend projects and building systems that have to scale, are exactly the work I've enjoyed most.

My backend foundation comes from production. At Wysa I engineered a multi-tenant healthcare platform on Node.js and MongoDB serving 8+ UK clients and 10,000+ submissions a month, integrated with an external partner platform via REST APIs and aggregation queries, and I owned its reliability and security (remediating 20+ penetration-testing findings). Earlier, at Cario, I designed and shipped 20+ REST APIs over PostgreSQL used in production by the frontend team. That experience taught me to care about clean contracts, backward compatibility, and what happens to a service under load, not just whether it works on my machine.

On the Python side, most of my recent backend work has been in Python: I built **AgenticSearch**, a FastAPI service with a multi-stage pipeline hardened by 150+ automated tests, and a Spark pipeline that processed a 1.4-billion-row dataset, where I cut runtime about 25% by reworking joins and partitioning to make it scale. I'll be candid that my two paid internships were in Node rather than Python, but Python is where most of my project and research backend work lives, and I move between the two comfortably.

What appeals to me about Rippling is the "startup of startups" platform idea, building abstractions that let product teams move fast, is a genuinely interesting engineering problem, and the internship's emphasis on real ownership is exactly what I want. I'd welcome the chance to contribute.

Thank you for your time and consideration.

Sincerely,
Deva Anand
