Dear Arine Hiring Team,

I am applying for the Full-Stack Engineering Intern role. Arine's mission, using data science, ML, and clinical expertise to make medication therapy safer at the scale of millions of lives, resonates with me because I spent my last two years building production software inside a healthcare company, where correctness genuinely affected patients rather than abstractions.

At Wysa I built a full-stack React and Node.js platform used daily by the AI team to label data for production clinical models, replacing spreadsheet workflows with secure role-based REST APIs and cutting 100+ hours/month of manual work while improving labeling throughput 60%. I also engineered the multi-tenant NHS eTriage backend serving 8+ UK clinical clients and 10,000+ monthly submissions, hardening authentication and rate limiting and remediating 20+ security findings on sensitive clinical data. Outside of work, I built and have maintained a production full-stack app (React + Redux, Node.js) that has been live and in daily use for 3+ years.

The part of this role I am most excited about is the AI-native engineering model. I built AgenticSearch, a Python AI agent that plans typed retrieval, extracts entities with deterministic parsers before falling back to an LLM, and verifies AI-generated output before it reaches the user, hardened with 150+ automated tests and provider routing and fallback across LLM backends. I use Cursor, Claude Code, and GitHub Copilot daily and took part in a measured Copilot productivity pilot at Wysa, so validating and debugging AI output and iterating on prompts is already how I build, not something new I would be learning here.

My stack maps closely to yours: React and TypeScript on the frontend, Python and Node.js on the backend, PostgreSQL and DynamoDB for data, event-driven and async services, AWS, and CI/CD with GitHub Actions. I would be glad to bring that to Arine's platform and to the team's push toward agentic development workflows. Thank you for your consideration.

Sincerely,
Deva Anand
