Cloudflare
People Innovation Lab, Software Engineer Intern Hiring Team
Austin, TX

Dear Hiring Team,

I'm applying for the Software Engineer Intern role in the People Innovation Lab. I'm a Computer Science master's student at UMass Amherst, and this posting genuinely caught my attention, because a chunk of what you're describing is what I've already been building on my own time, on Cloudflare.

I built **cf-ai-research-scout**, an edge-native AI agent that runs end-to-end on Cloudflare Workers: it fetches web sources, reasons through multi-step research, and streams results back over WebSocket in real time. I leaned on the actual stack your team works in, AIChatAgent and Durable Objects for stateful chat, WorkflowEntrypoint for durable multi-step tasks that survive process restarts and tool failures, and D1 for persistence, with no external backend at all. When I read that your team is building AI agents for the People organization that can reason, act, and coordinate on their own, that's the exact problem I was already curious enough to go build a version of.

The internal-tooling part of the role is also familiar territory. At Wysa I spent two years as a backend engineer, and one of the things I'm proudest of is a full-stack internal tool I built from scratch (React, Node.js, MongoDB) for our AI team, replacing a messy spreadsheet workflow with a real annotation platform. It cut over 100 hours of manual work a month and improved throughput by 60%, and the best part was iterating on it directly with the people who used it every day. That's the loop your role describes, spot a normalized problem someone has just learned to live with, ship something, and make it better the next sprint.

On fundamentals, I work in JavaScript and TypeScript daily, I'm comfortable owning a backend (Node, Express, FastAPI) end to end, and I've shipped and maintained a production web app solo, **Underdogs Fitness**, which has been live for over three years. I also lean on AI-assisted tools like Cursor and Claude Code as a normal part of how I build, not as a novelty. I'd love to bring that mix of curiosity and shipping to the People Innovation Lab.

Thank you for considering my application.

Sincerely,
Deva Anand
