DataVisor
AI/ML Engineering Internship Hiring Team

Dear Hiring Team,

I'm applying for the AI/ML Engineering Intern role. I'm a Computer Science master's student at UMass Amherst, and what stands out about this position is the blend it asks for, data pipelines, ML, agentic AI, and a real concern for security, which happens to be the exact mix of things I've spent the last couple of years working on.

The data-pipeline side is where I'm most at home. I built a Spark pipeline that processed a 1.4-billion-row dataset and cut its end-to-end runtime by about 25% by reworking joins, enabling adaptive query execution, and tuning partitioning, then used stage-level profiling to bring the analytics tail-latency ratio down meaningfully. That experience of making a high-throughput pipeline both faster and more predictable is directly what your Intelligence Layer work calls for.

On the AI side, most of my recent projects are agentic. I built **AgenticSearch**, an LLM agent that plans retrieval, uses tools, and verifies its own outputs with cell-level provenance, hardened with 150+ tests; **AutoEval**, a self-improving evaluation agent; and a team **RAG** pipeline where my multi-view retrieval lifted supporting-fact recall by 2.68%. I've also trained supervised models from scratch (CNN/ResNet classifiers in CS 689) and published a transfer-learning classifier, so the "deploy and monitor ML pipelines" side isn't unfamiliar either.

Finally, security isn't an afterthought for me. At Wysa I owned reliability and security for a multi-tenant healthcare platform, implementing AWS KMS envelope encryption for sensitive data and remediating 20+ penetration-testing findings, which is why a fraud-and-risk platform built around privacy-first design genuinely appeals to me.

I know I work with Spark rather than Kafka or Flink today, but those are the kinds of tools I pick up quickly, and I'd be excited to learn them on real production systems. I'd welcome the chance to contribute.

Thank you for your time and consideration.

Sincerely,
Deva Anand
