Nokia
Software Engineering Co-op Hiring Team
Sunnyvale, CA

Dear Hiring Team,

I'm applying for the Software Engineering Co-op in Sunnyvale. I'm a Computer Science master's student at UMass Amherst, and the role lines up almost exactly with how I already work: Python-first engineering, real exposure to AI interfaces, and a habit of taking a delegated problem and delivering it end to end with minimal hand-holding.

That independence shows up across my work. At Cario I integrated LLMs into a customer-facing chat product and shipped an open-source LLM auto-commenting feature end to end with no ML mentor on the team, while building 20+ Node.js and Fastify REST APIs over PostgreSQL. On my own time I built **AgenticSearch**, a Python agent that turns open-ended queries into structured, verified entity tables with cell-level provenance, hardened with 150+ automated tests, and **AutoEval**, an agent that improves a retrieval evaluation suite while guarding against gaming its own benchmark. These are the “familiarity with AI interfaces” and “real-world applications of AI” the role asks for, built rather than just studied.

I also work well inside a team, which I know matters as much as raw output for a co-op. In two years as a backend engineer at Wysa, I built an ML training-data annotation platform used daily by the AI team (cutting 100+ hours of manual work per month), owned reliability on a multi-tenant NHS system serving 8+ UK clients, and ran knowledge-transfer sessions that brought a new developer to on-call readiness in about six weeks. I also took part in a GitHub Copilot productivity pilot, using AI-assisted workflows for code migration and review while keeping the output aligned to our team's conventions, exactly the kind of curious, AI-forward engineering Nokia is leaning into.

What draws me to Nokia specifically is that connectivity in the AI era is real infrastructure, not a demo, and Bell Labs has a long record of turning hard research into things that ship. I'd bring a proactive, problem-solving attitude, the ability to run with ambiguous tasks, and genuine enthusiasm for working alongside your team for the term.

Thank you for your time and consideration. I'd welcome the chance to discuss how I can contribute.

Sincerely,
Deva Anand
