Siemens EDA — Office of Technology
AI/ML Software Engineer Intern Hiring Team

Dear Hiring Team,

I'm applying for the AI/ML Software Engineer Intern role in the Office of Technology. I'm a Computer Science master's student at UMass Amherst, and the role lines up closely with what I actually build: AI agents, LLM features driven by careful prompt engineering, and the data pipelines that feed them.

Most of my recent work is agentic. I built **AgenticSearch**, a Python AI agent that turns open-ended queries into structured, verified results through typed planning, tool use, and output verification, hardened with 150+ automated tests; and **AutoEval**, an agent that improves an evaluation suite while guarding against gaming its own metrics. On the LLM side, at Cario I shipped customer-facing features powered by LLMs, iterating on prompt design and response-quality heuristics, which is the same prompt-engineering loop your team applies to design-process automation. I work with MCP at the basics level and would be glad to go deeper building MCP servers and agents.

The data and modeling side is just as familiar. I built a Spark ETL pipeline that cleaned and preprocessed a 1.4-billion-row dataset, cutting runtime about 25%, and I've trained classification models from CNN/ResNet image classifiers (CS 689) to a transfer-learning model for medical image classification that became my first IEEE publication. I'm comfortable with the statistics too: in a recent study I reported results with bootstrap confidence intervals and McNemar's test rather than eyeballing them.

I'll be honest that I don't have EDA or electronics background yet, but I learn quickly and I'm genuinely excited to apply agentic AI and data-driven methods to real engineering problems like PCB design automation. I'd welcome the chance to contribute.

Thank you for your time and consideration.

Sincerely,
Deva Anand
