Docugami Hiring Team
Docugami, Kirkland, Washington

Dear Docugami Hiring Team,

I am excited to apply for the Software Engineering Intern role. I am a Computer Science master's student at UMass Amherst with two years of production backend experience and a graduate focus on NLP, retrieval, and information extraction, which is exactly the frontier Docugami is pushing in document understanding.

Your mission resonates with the work I gravitate toward: turning unstructured language into structured, trustworthy output. In a personal project, AgenticSearch, I built a multi-stage service that converts open-ended queries into structured entity tables through typed retrieval planning and deterministic information extraction with an LLM fallback, returning cell-level provenance for every value so nothing is a black box, and I hardened it with over 150 automated tests. In a graduate NLP project I built the multi-view retrieval component of a knowledge-graph-guided RAG pipeline that lifted supporting-fact recall on a 4,905-question benchmark. Most relevant to your in-house science team: as the sole engineer for UMass's Culture and Morality Lab, I am productionizing a published NLP measurement method into a self-serve platform, working directly with researchers to turn a scientific technique into usable software. That translation from science to product is exactly what this role centers on.

I also thrive in the early-stage, starter environment you describe. I am currently a founding engineer at an early-stage healthtech startup, building full-stack features end to end from the product's earliest version, and before my master's I owned a multi-tenant NHS SaaS backend at Wysa serving 8+ UK clinical clients and 10,000+ monthly submissions. I am comfortable defining direction under ambiguity, learning quickly, and shipping across Python, Node, and the rest of the stack.

I would love to help build the first public version of Docugami's product and to work alongside your engineers and AI researchers. Thank you for your consideration.

Sincerely,
Deva Anand
