Hiring Team

Fintech LLC

Re: Software Engineering Intern

Dear Hiring Team,

I am applying for the Software Engineering Intern role at Fintech. I am a full-time MS Computer Science student at UMass Amherst (graduating May 2027), and before grad school I spent two years as a backend engineer shipping and maintaining production systems. A role centered on backend development, relational data, and ETL is exactly the kind of work I want to keep doing, and Fintech's mission of centralizing invoice, payment, and POS data across more than a million B2B relationships is a genuinely appealing problem to build for.

Most of my experience lives in the parts of the job this role describes. At Wysa I engineered a multi-tenant backend in Node.js and MongoDB that served 8+ UK clients and processed 10,000+ monthly submissions through REST integrations, and I investigated production incidents during releases and client integrations down to their root cause before shipping fixes. At Cario I designed and shipped 20+ RESTful APIs in Node.js and Fastify backed by PostgreSQL, with input validation, clean data models, and backward-compatible contracts used in production. Both roles taught me to treat tests, code quality, and clear communication with senior engineers as the job itself, not overhead.

The data and ETL side of this role maps closely to my recent work. I built and tuned a Spark ETL pipeline over a roughly 1.4 billion row dataset, extracting, transforming, and loading the data with broadcast joins, adaptive execution, partitioning, and column pruning to cut end-to-end runtime by about 25 percent, using Spark UI to find and confirm each bottleneck. Alongside that I have shipped a fully tested FastAPI service that turns messy inputs into structured, verifiable records, which is the same shape of problem as turning raw invoice and POS data into clean structured knowledge.

I am a fast and continuous learner, comfortable picking up a new language or framework quickly, so working across .NET and Node.js is something I would enjoy rather than shy away from. I would welcome the chance to contribute to Fintech's engineering initiatives from day one and to learn from your senior developers. Thank you for your time and consideration.

Sincerely,

Deva Anand
