Hiring Team

RSA

Re: Software Engineer Intern, ID Plus

Dear Hiring Team,

I am applying for the Software Engineer Intern role on the ID Plus team. I am a full-time MS Computer Science student at UMass Amherst (graduating May 2027), and before grad school I spent two years as a backend engineer where security was not a side concern but a core part of the job. A role focused on real information-security problems for enterprise customers is exactly the kind of work I want to do, and RSA's decades of leadership in authentication and identity is a place I would be genuinely proud to contribute to.

Most of my professional work maps closely to what this team does. At Wysa I owned backend security for a multi-tenant platform serving UK clinical clients: I implemented AWS KMS encryption for sensitive PII, hardened authentication and rate limiting, added audit logging, and remediated more than 20 findings from third-party penetration tests. On my own MERN platform I built JWT-based authentication and multi-tenant, per-tenant data scoping from day one. Working on access, authentication, and secure-by-default design is familiar ground for me, not something I would be learning from scratch.

Two of RSA's stated priorities line up especially well with how I work. First, strength in automated testing: I treat tests as part of the deliverable, and I hardened a Python backend service of mine with more than 150 automated tests before I trusted it. Second, cloud services: I have designed and shipped backend services to the cloud, including a scalable edge service with durable, restart-safe workflows, so designing and testing cloud applications is where I am most comfortable.

I want to be straight about one thing: my production experience is in Node.js, TypeScript, and Python rather than Java and Spring. What I can promise is that I pick up new stacks quickly and take real ownership once I do. I learn fastest when I am a little out of my depth, and a security-first, fast-paced team solving problems that genuinely matter is exactly where I want to do that. Thank you for your time and consideration.

Sincerely,

Deva Anand
