

Deva Anand

(413) 315-1715 | devaanand@umass.edu | devaanand.com | linkedin.com/in/devaaa | github.com/Deva-1903

Education

University of Massachusetts Amherst

Master of Science in Computer Science

September 2025 – May 2027 (Expected)

Amherst, MA

Coursework: Advanced NLP, Advanced Machine Learning, Systems for Data Science, Optimization in CS, Performance Engineering

Vels Institute of Science, Technology and Advanced Studies

Bachelor of Engineering in Computer Science and Engineering

August 2019 – May 2023

Chennai, India

Skills

Languages

Python, JavaScript, TypeScript, SQL, Bash

AI / ML & LLM Tools

OpenAI API, Claude / Claude Code, Groq, Ollama, prompt engineering, LLM agents & tool use, RAG, evaluation, PyTorch, HuggingFace Transformers

Data & Retrieval

SQL querying, MongoDB aggregation, SQLite, Spark / PySpark, RRF, cross-encoder reranking, MMR, web scraping, cell-level provenance

Backend & Automation

FastAPI, Node.js, Express, REST APIs, async services, custom scripting, integration testing, Git, GitHub Actions

Cloud & DevOps

AWS, GCP, Azure, Docker, CI/CD, Linux

Experience

Wysa

Backend Engineer

July 2023 – July 2025

Bengaluru, India

- Architected a full-stack **data annotation platform** (React, Node.js, MongoDB) used daily by the AI team to label data for production models, replacing manual spreadsheet workflows and cutting operations by **100+ hours/month** while improving throughput by **60%**.
- Engineered a multi-tenant **SaaS** backend (Node.js, MongoDB) for **8+ UK clients** processing **10,000+ monthly submissions**, integrated with a third-party enterprise platform via REST APIs; kept it secure and scalable through authentication hardening and **20+ VAPT** remediations.
- Served as the primary technical point of contact for the eTriage backend, partnering with cross-functional clinical and product teams and running knowledge transfer to onboard new engineers.

Cario Growth Services Pvt. Ltd.

Backend Developer Intern

November 2022 – May 2023

Chennai, India

- Integrated **LLMs** into a customer-facing chat product to generate context-aware replies, iterating on **prompt design** and response-quality heuristics, and shipped **20+ REST APIs** (Node.js, Fastify, PostgreSQL) backing the experience.
- Migrated the core codebase from **JavaScript to TypeScript** across multiple repositories, improving type safety and long-term maintainability of the backend services.

Projects

AgenticSearch - Provenance-First Entity Discovery

github.com/Deva-1903/ciir_agentic_search

Python, FastAPI, Brave Search, OpenAI / Groq, SQLite

- Built a multi-stage agentic pipeline that turns open-ended queries into **structured, actionable tables** via typed retrieval planning, **LLM extraction** (OpenAI / Groq) with deterministic fallback, output verification, and **cell-level provenance** for every value.
- Hardened the service with **150+ automated tests**, provider routing and fallback across LLM backends, and pipeline instrumentation, keeping LLM-driven extraction predictable, secure, and scalable.

AI Research Scout - Conversational Research Assistant

github.com/Deva-1903/cf_ai_research_scout

TypeScript, Cloudflare Workers AI, WebSockets

- Built a conversational **AI research assistant** that fetches live web sources, generates multi-step research digests, and streams answers back to the user in real time, prototyped end-to-end.
- Designed durable multi-step agent workflows so long-running tasks survive process restarts and tool failures, with conversation state persisted server-side without an external database.

AutoEval - Evaluation Improvement Agent

github.com/Deva-1903/AutoEval

Python, IR Evaluation, Git Automation

- Built an evaluation-improvement **agent** that proposes new queries and labels, scores them against multiple systems, and accepts only updates that improve discriminative power on a holdout-heavy objective.
- Added anti-Goodharting guardrails (schema checks, duplicate rejection, read-only holdout protection) and **automated** accepted updates to Git with report cards for an auditable, reproducible workflow.

Publication & Extracurriculars

- Publication:** “Alzheimer’s Disease Classification using Transfer Learning,” **IEEE CONIT 2023**, applied deep transfer learning to neuroimaging data for medical image classification.
- Selected for **GirlScript Summer of Code (GSSoC) 2023** and contributed to multiple open-source projects (Linkfree, Freehit, ProjectsHut).
- Tutored **30+** students in programming at Sayur, a non-profit in South Tamil Nadu, explaining technical concepts to non-technical learners.
